Choosing a Green Project for your School

When considering a Green Project for your School, carefully examine the following questions:

1. Will this project save natural resources?
2. Will this project promote a greener, healthier, and sustainable School?
3. Will this project result in any savings for the District?
4. Will Green Technology be used in this project?

All projects being entered into the 14/15 Project Green Program must be approved by Facilities Support Services. The Green Project Approval Form will be posted on the Sacramento City Unified School District’s Website sometime in January/February 2015. Please note, due to this year’s Project Green funding regulations, all projects being submitted for the Project Green Program must fall under the classifications of a Capital Improvement Project with a minimum of a 5 year life span.

Examples of Capital Improvement Projects:

- Solar Tubes/Skylights/Tinted Windows
- Irrigation Upgrades/Improvements
- Fixture Upgrades (automatic faucets, automatic hand dryers, flush valves/low-flow toilets)
- HVAC Energy Management Controls
- HVAC upgrades/installation
- Recycling Efforts
- Hydration Stations
- Artificial Turf
- Occupancy Sensors
- Bike Racks
- LED Lighting
- Shade Structure

Regardless of project chosen for implementation at your school, all final construction must comply with district standards and policies associated with the Sacramento City Unified School District. For additional information, please contact Facilities Support Services.
