

# PROJECT GREEN 2017

**Date:** Thursday, October 20

**Time:** 3:30–5:30 pm

**Location:** WASHINGTON ELEMENTARY  
520 18th Street

## Energy Conservation: Lighting

US schools spend an estimated \$6 billion per year on energy costs. Improving efficiency is the easiest, most cost effective way to reduce energy consumption, yet remains a challenge for many school districts. Attend this year's Project Green Orientation to learn how you can have a positive impact on your school's energy use while creating hands-on learning opportunities for your students, reducing greenhouse gas emissions and creating a more comfortable learning environment at your school. This year's new and improved program will create a greater personal connection for students and provide professional development opportunities for advisors as we take a more collaborate approach to learning about energy conservation in our schools.
