NOTES:

Not all utilities may be shown. Utility vault & sanitary/storm structure dimensions may not be fully represented. Some laterals were not accessible & were therefore not located. Depths shown are to center of conductive utility & are generally +/-10% of actual depth, when not distorted by adjacent conductors. Accuracy of electronic depth decreases when adjacent utilities are located within 5 ft. Critical depths require verification by potholing. Sanitary & storm depths are measured from rim to invert level.
