## Parent Guide for Kindergarten Math

## Major Learning Targets for This Grade

| Counting and Numbers |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Students will read, write, and count numbers up to 100. |  |  |  |  |
| "I can count to 100 by tens and ones." | "I can read numbers fro | write <br> to 20." | "I can compare two written numbers between 1 and 10." | "I can make and take apart numbers from 11-19 by telling how many tens and ones are in the numbers." |
| Example Task: <br> There are some green cubes in this set and some red cubes in this set. Which set has fewer or is there an equal amount of cubes in each set? (Students are given a set of 7 green cubes and a set of 5 red cubes.) |  |  |  |  |
| Student A: (Matching Strategy) <br> I lined the red cubes to match the green cubes. I saw that there are 2 more green cubes. There are fewer red cubes than green cubes. |  | Student I used a less. The there are | (Using a Ten-Frame) n frame to tell which has are 2 more green cubes so ess red cubes. | Student C: (Counting Strategy) <br> I know that 7 is more than 5 because I counted 2 more green cubes. This tells me that there are fewer red cubes than green cubes. |

## Shapes

Students will name and tell shapes and compare two-and-three-dimensional shapes.
"I can name and talk about $\quad$ "I can compare shapes and tell if a shape is shapes I see around me."
flat (two-dimensional) or solid (three dimensional)."
"I can make shapes by drawing or using simple shapes to make larger shapes."

Example Task:
Join these two rectangles to make a square.
How do you know that this new shape is a square? (Students are given 2 rectangles.)

## Parent Guide for Kindergarten Math

## Expected Behaviors in Math Class

Students will...

- Consider available tools to help them solve problems and deepen understanding (including hands-on tools and technology).
- Look for patterns and connections.
- Explain their thinking and their process for solving a problem.
- Make predictions and estimations.
- Decide if an answer is reasonable.
- Justify conclusions.
- Communicate ideas clearly verbally and in writing, using math vocabulary when appropriate.
- Apply mathematics to solve problems in everyday life.

## How Can I Support My Student in This Course?

Access Google Classroom Regularly (if Applicable)
ค. $\Rightarrow$ Look at the Stream for daily announcements and a weekly schedule.
$\leftrightarrows$ View the Classwork for assignment information and support.

## Encourage Multiple Strategies and Representations of the Problem

$\leftrightarrows$ Ask your student to solve the problem in different ways.
$\Rightarrow$ Encourage the use of different representations (e.g., symbols, words, or pictures/visuals), and have them make connections between representations.

## Ask Questions \& Encourage Your Student to Ask Questions

$\Rightarrow$ When your student is stuck, don't simply tell them the correct answer. Ask questions like:

- "What is the question in the problem/task?"
- "What do you understand/know from the task?"
- "How do you know?" Listen while your student explains their mathematical reasoning and ask,
"Does your answer make sense?" based on the context of the problem or task.
$\Rightarrow$ Encourage your student to write down questions to bring to their teacher or peer the next day.

## Value Mistakes

Students are learning when they are making mistakes; create an environment where your student feels comfortable making a mistake and learning from it.

## Acknowledge Effort over Answers and Speed

$\Rightarrow$ Celebrate how hard your student is working, whether their answer is correct or not.
$\Rightarrow$ When your student is stuck, remind them that learning can be challenging, and if they continue to practice and work hard, they will improve.
